Profile

I am a entry-level designer, a challenger in the field of UX design, with a background in civil structural engineering. Despite the different fields, I possess core capabilities required in this area: communication and coordination, design thinking, and problem-solving. Drawing, 3D modeling, presenting ideas, and considering feasibility are my specialties.

During my journey of self-study for this career transition, I have completed the Google UX Design course, accumulated UX portfolio projects, and built up my personal website. I am excited to bring my passion to UX and product design, aiming to provide users with enhanced experiences.
